

ALVIN PIQUERO

Business Analyst (AI & Automation) | Process Analysis, Requirements & Workflow Automation

Candijay, Bohol, Philippines | alvin_piquero@outlook.ph | linkedin.com/in/alvinpiquero481743254 | PHT (UTC+8) flexible overlap with US business hours

PROFESSIONAL SUMMARY

Business analyst with 8+ years bridging operations, finance, and legal stakeholders and the systems that support them including 4.5 years as the sole analyst-engineer for a financial cooperative serving 7,000+ members. Track record of identifying broken or manual processes, gathering requirements directly from the people affected, and delivering solutions that measurably move the needle: backlogs eliminated, lookup times cut 90%+, data accuracy improved from roughly 70% to 99%, and infrastructure costs validated against outside vendor quotes at 1/3 the price. Increasingly focused on AI and automation as the delivery layer — currently designing an AI governance workflow (n8n) that turns policy and process requirements into an auditable, rules-based automation pipeline. Comfortable owning analysis through delivery: requirements, process mapping, solution design, stakeholder communication, and user adoption.

CORE COMPETENCIES

Business Analysis: Requirements gathering, process mapping & optimization, stakeholder communication, cost/vendor (TCO) analysis, root cause analysis, business case authoring

AI & Automation: n8n workflow design (RAG/hybrid AI inference pipelines, confidence scoring, audit logging), AI-assisted development (Claude, ChatGPT, DeepSeek, Gemini), automation opportunity identification

Data & Reporting: ETL pipeline development, data migration & validation, SQLite database design, Python (Pandas, OpenPyXL), report automation

Delivery & Support: User training & documentation, SOP authoring, post-deployment support, VBA/Excel automation, SQL

CERTIFICATIONS

Google Cybersecurity Professional | Google IT Support Professional | Google AI Essentials

KEY PROJECTS — CASE STUDIES

AI Governance Workflow Requirements & Automation (CAS Project) *Independent Build* 2026

- Problem: no structured way to translate cooperative policy rules into a governed, auditable AI-assisted decision process.
- Analysis & Solution: mapped policy scope, escalation rules, and confidence thresholds into a 6-stage requirements flow; built it as a self-hosted n8n workflow (query intake → retrieval → policy compliance → inference → confidence scoring → audit logging).
- Outcome: produced a full documentation set (business case, risk & mitigation report, implementation strategy) enabling non-technical stakeholders to evaluate and govern the system before deployment.

3-Year Reporting Backlog Resolution *SAMCO*

- Problem: three years of ATM transaction data sat unprocessed in password-protected archives, blocking reconciliation.
- Analysis & Solution: mapped the manual extraction process, then designed a Python/SQLite ETL pipeline to automate it end-to-end.
- Outcome: eliminated the backlog in one day; a multi-hour manual task now runs in under 5 minutes.

Loan & Insurance Process Automation *SAMCO, live since 2022*

- Problem: amortization, interest, insurance (LPPI), and payment tracking for 7,000+ loan accounts were handled through slow, manual, error-prone processes.
- Analysis & Solution: gathered requirements from finance and legal stakeholders; built and maintain a production VBA/Excel platform covering the full loan lifecycle, including automating the insurance computation and print workflow on top of an existing insurer rate structure.
- Outcome: platform has run in daily production for 4+ years across 7,000+ accounts.

Core Banking Data Migration *SAMCO*

- Problem: 7,000+ savings and share capital accounts needed migration to a new core banking system, with field-mapping accuracy starting around 70%.

- Analysis & Solution: led the migration effort, iteratively validating field mappings and building a Python tool that cut member lookup time from 60 seconds to under 5 seconds.
- Outcome: improved data accuracy to 99% and enabled a smooth cutover to the new system.

Infrastructure Investment Business Case

SAMCO

- Problem: leadership needed to decide on infrastructure spend without a clear cost baseline.
- Analysis & Solution: authored ₱100K and ₱500K proposals with hardware canvassing, vendor comparison, and total-cost-of-ownership analysis.
- Outcome: the ₱100K proposal was later validated when an external vendor quoted roughly 3x the cost for equivalent scope.

PROFESSIONAL EXPERIENCE

IT Specialist (Sole Engineer) Santa Ana Multi-Purpose Cooperative (SAMCO) *December 2021 – June 2026*

- Acted as primary analyst and technical liaison between operations, finance, and legal teams, translating business requirements into production systems for an organization serving 7,000+ members.
- Identified and prioritized automation opportunities across departments; delivered infrastructure proposals, process redesigns, and reporting automation with measurable adoption and cost outcomes.
- Reverse-engineered undocumented legacy processes (e.g. legal collection document generation) and rebuilt them as documented, maintainable systems, cutting a multi-hour task to under 1 minute.
- Identified and responded to a data exposure incident involving member records; drafted a corrective data handling policy aligned with the Data Privacy Act (RA 10173).
- Delivered user training, documentation, and post-deployment support for all systems, improving adoption and reducing recurring support requests.
- Used AI-assisted development tools (Claude, ChatGPT, DeepSeek) daily to accelerate analysis, prototyping, and documentation while retaining full ownership of requirements and outcomes.

Technical Support Specialist Additech (Remote) *January 2019 – August 2021*

- Provided remote technical support across multiple sites for 2.5 years, diagnosing and resolving hardware and software issues in a fully distributed, asynchronous team environment.
- Monitored system performance using dashboards and KPI tools; managed repair tickets end-to-end and coordinated with field teams to track resolution timelines.

Loan Processor / IT Support Masagana Multi-Purpose Cooperative *February – December 2018*

- Processed loan applications, maintained accurate client records, and provided technical support for internal systems.

Computer Technician High Technology Computer Services *February – December 2016*

- Performed hardware/software installation, troubleshooting, and network setup; delivered on-site support and maintenance.

EDUCATION

BS Computer Engineering Holy Name University, Tagbilaran City, Bohol (2009–2016)

Fourth year completed; left to pursue full-time IT career.

ADDITIONAL INFORMATION

- Remote-ready: 2.5 years of remote, multi-site technical support (Additech) plus 4.5 years of independent, end-to-end project ownership (SAMCO).
- AI productivity tools: daily use of Claude, ChatGPT, Gemini, and DeepSeek for prompt engineering and AI-assisted development.
- Availability: can start within 2 weeks. Personal computer and dedicated workspace available.
- Languages: English (Professional), Tagalog (Professional), Visayan (Native).
- Portfolio: github.com/miming-psspss/alvinp-portfolio
