

# ALVIN PIQUERO

## AI Automation Specialist | n8n, Python, VBA & Process Automation

Candijay, Bohol, Philippines | [alvin\\_piquero@outlook.ph](mailto:alvin_piquero@outlook.ph) | [linkedin.com/in/alvinpiquero481743254](https://www.linkedin.com/in/alvinpiquero481743254) | PHT (UTC+8) flexible overlap with US business hours

### PROFESSIONAL SUMMARY

IT automation specialist with 8+ years across technical support, systems administration, and process automation including 4+ years as the sole engineer building production automation for financial operations serving 7,000+ members. Experienced in remote, asynchronous work environments (including 2.5 years supporting multi-site operations remotely). Hands-on with workflow automation platforms (currently building on n8n), Python/VBA, and daily AI-assisted development (Claude, ChatGPT, DeepSeek, Gemini). Comfortable owning the full lifecycle: gathering requirements from cross-functional stakeholders, designing and building the solution, and deploying, training, and documenting it for production use. Track record of turning multi-hour manual processes into automated workflows that run in minutes.

### CORE COMPETENCIES

**Automation Platforms:** n8n (workflow automation, RAG/hybrid AI inference pipelines), Python (Advanced), VBA (Excel Automation), SQL, PowerShell

**AI & Data:** AI-assisted development, machine-learning-adjacent tooling (RAG pipelines, confidence scoring), SQLite database design, ETL pipeline development, Pandas, OpenPyXL

**Business Analysis & Support:** Requirements gathering, process optimization, stakeholder communication, user training & documentation, SOP authoring, root cause analysis

**Infrastructure & Operations:** Windows administration, PC hardware & networking, remote/multi-site technical support, system deployment, cybersecurity fundamentals, incident response

### CERTIFICATIONS

Google Cybersecurity Professional | Google IT Support Professional | Google AI Essentials  
(Verified badges: [credly.com/users/alvin-piquero](https://credly.com/users/alvin-piquero))

### KEY PROJECTS

#### n8n Automation Workflow for AI Governance (CAS Project) Independent Build 2026

- Designing and building a self-hosted n8n workflow (Docker-based) automating query intake, data retrieval, policy-compliance checks, hybrid AI inference, confidence scoring, and audit logging across six discrete stages.
- Authored a supporting documentation corpus business case analysis, risk & mitigation report, and implementation strategy translating a technical build into materials usable by non-technical stakeholders.

#### Batch Financial Report Extractor Submitted to OnlineJobs.ph SOP Program 2026

- Built a working Python desktop tool automating batch archive extraction and Excel report consolidation, replacing a manual multi-step process with a few clicks; packaged with full user documentation as a two-part guide.

#### ATM Data Extraction & Reporting Automation Python, SQLite SAMCO

- Resolved a 3-year data backlog in one day; automated extraction from password-protected archives into structured reports.

#### Legal Notice & Mediation Batch Processing System VBA → Python/PySide6/SQLite SAMCO

- One-click document generation for demand letters and mediation forms at scale; reverse-engineered from undocumented VBA logic into a modern desktop application.

#### Legal Notice & Mediation Batch Processing System VBA → Python/PySide6/SQLite SAMCO

- One-click document generation for demand letters and mediation forms at scale; reverse-engineered from undocumented VBA logic into a modern desktop application.

## PROFESSIONAL EXPERIENCE

---

### **IT Specialist (Sole Engineer)** Santa Ana Multi-Purpose Cooperative (SAMCO) *December 2021 – Jun 2026*

- Sole IT engineer and primary technical liaison between operations, finance, and legal teams, translating business requirements into production software for an organization serving 7,000+ members.
- Built and maintained a production VBA loan-processing platform supporting amortization schedules, interest calculations, insurance computation, payment tracking, promissory note generation, and ledger reporting.
- Designed a Python/SQLite ETL pipeline that transformed three years of unstructured ATM transaction data into structured reports, eliminating a longstanding backlog within a one-day turnaround.
- Reduced member ID lookup time by 90%+ (60s under 5s) with a custom Python desktop tool, enabling migration to a new core banking system.
- Authored infrastructure proposals (100K pesos and 500K pesos) with hardware canvassing, vendor comparison, and total-cost-of-ownership analysis; the 100K pesos proposal was later validated when an external vendor quoted roughly 3x the cost for equivalent scope.
- Delivered user training, documentation, and post-deployment support for all systems, improving adoption and reducing recurring support requests.
- Used AI-assisted development tools (Claude, ChatGPT, DeepSeek) daily to accelerate prototyping, debugging, and documentation while retaining full ownership of requirements, testing, and production outcomes.

### **Technical Support Specialist** Additech (Remote) *January 2019 – December 2021*

- Provided remote technical support across multiple sites for 2.5 years, diagnosing and resolving hardware and software issues in a fully distributed, asynchronous team environment.
- Monitored system performance using dashboards and KPI tools; managed repair tickets end-to-end and coordinated with field teams to track resolution timelines direct experience with the reporting and coordination rhythms of remote-first operations.

### **Loan Processor / IT Support** Masagana Multi-Purpose Cooperative *February – December 2018*

- Processed loan applications, maintained accurate client records, and provided technical support for internal systems.

### **Computer Technician** High Technology Computer Services *February – December 2016*

- Performed hardware/software installation, troubleshooting, and network setup; delivered on-site support and maintenance.

## EDUCATION

---

BS Computer Engineering Holy Name University, Tagbilaran City, Bohol (2009–2016)

Fourth year completed; left to pursue full-time IT career.

## ADDITIONAL INFORMATION

---

- Remote-ready: 2.5 years of remote, multi-site technical support (Additech) plus 4+ years of independent, end-to-end project ownership (SAMCO).
- AI productivity tools: daily use of Claude, ChatGPT, Gemini, and DeepSeek for prompt engineering and AI-assisted development, while retaining full ownership of final solutions.
- Availability: can start within 2 weeks. Personal computer and dedicated workspace available.
- Languages: English (Professional), Tagalog (Professional), Visayan (Native).
- Portfolio: [github.com/miming-psspss/alvinp-portfolio](https://github.com/miming-psspss/alvinp-portfolio)
