

ALVIN PIQUERO

Business Operations Specialist | AI-Powered Automation, Systems & Vendor Management

Candijay, Bohol, Philippines | alvin_piquero@outlook.ph | linkedin.com/in/alvinpiquero481743254 | Available for US Eastern-hours (night shift, Manila) full-time work | github.com/miming-pssps/alvinp-portfolio | credly.com/users/alvin-piquero

PROFESSIONAL SUMMARY

Versatile business operations generalist with 8+ years spanning finance, legal, and clinical-adjacent operational support, including 4+ years as the sole operations/IT resource for a financial cooperative serving 7,000+ member accounts. Built and ran the full operational backbone for that organization end-to-end, vendor and cost management, financial/reconciliation workflows, systems administration, documentation, and reporting with no team to lean on. Genuinely AI-fluent, not just AI-curious: currently building a governed, auditable automation pipeline in n8n and using Claude daily to multiply output, with a public portfolio of finished work product. Comfortable owning ambiguous, cross-functional projects asynchronously and available immediately for full-time US Eastern-hours work.

CORE COMPETENCIES

- **Business Operations:** vendor & contractor management, cost/vendor (TCO) analysis, SOP authoring, process documentation, root-cause analysis, cross-functional stakeholder coordination
- **AI & Automation:** n8n workflow automation (RAG/hybrid AI pipelines, confidence scoring, audit logging), daily AI-assisted work with Claude/ChatGPT/Gemini/DeepSeek, automation opportunity identification, prompt engineering
- **Systems & Data:** systems administration & data-quality auditing, ETL pipeline development, data migration & validation, SQLite/SQL, Python (Pandas, OpenPyXL), recurring reporting & KPI dashboards
- **Financial & Delivery Support:** AP/expense-adjacent reconciliation support, budget/business-case authoring, VBA/Excel automation, user training & post-deployment support

KEY PROJECTS

AI Governance Workflow & Automation Build (CAS Project) — *Independent Build, 2026*

- Scoped a rotating, ambiguous project end-to-end mapped policy, escalation, and confidence-threshold rules into a 6-stage requirements flow with no pre-existing spec to follow.
- Built it as a self-hosted n8n automation (query intake → retrieval → policy compliance → inference → confidence scoring → audit logging). The same caliber of AI-powered workflow building ANNA deserves.
- Produced a full documentation set (business case, risk & mitigation report, implementation strategy) so non-technical stakeholders could evaluate and govern the system. The SOP/documentation habit applied to a live automation build.

Core Banking Data Migration & Cutover Support — *SAMCO*

- Led migration of 7,000+ member accounts to a new core banking system, iteratively validating field mappings from roughly 70% to 99% accuracy, direct experience with the data-integrity discipline needed for system migrations and market-launch cutovers.
- Built a Python lookup tool that cut member lookup time from 60 seconds to under 5 seconds, keeping operations running clean through the transition.

Infrastructure & Vendor Cost Analysis — *SAMCO*

- Owned vendor sourcing and total-cost-of-ownership analysis for two infrastructure proposals (₱100K and ₱500K), including hardware canvassing and vendor comparison.
- The ₱100K proposal was later validated when an outside vendor quoted roughly 3x the cost for equivalent scope — vendor management judgment holding up against outside pricing.

3-Year Reporting Backlog Resolution — *SAMCO*

- Found three years of ATM transaction data sitting unprocessed in password-protected archives, blocking reconciliation.
- Designed a Python/SQLite ETL pipeline that eliminated the backlog in one day and cut a multi-hour manual reconciliation task to under 5 minutes going forward.

PROFESSIONAL EXPERIENCE

IT & Operations Specialist (Sole Resource) | Santa Ana Multi-Purpose Cooperative (SAMCO) *Dec 2021 – Jun 2026*

- Acted as the sole operations/technical resource for a financial cooperative serving 7,000+ members owned everything from vendor relationships to financial-process automation to systems administration with no team to delegate to.
- Managed vendor relationships and cost analysis for infrastructure investments, including hardware canvassing, vendor comparison, and total-cost-of-ownership proposals presented to leadership.
- Built and maintained a production financial-operations platform (loan amortization, interest, insurance, and payment tracking) running daily in production for 4+ years across 7,000+ accounts.
- Ran systems administration and data-quality work across core banking, reconciliation, and reporting systems auditing accuracy, fixing issues at the source, and keeping data trustworthy across platforms.
- Reverse-engineered an undocumented legacy legal-document process and rebuilt it as a documented, maintainable system, cutting a multi-hour task to under 1 minute.
- Identified and responded to a member-data exposure incident; drafted a corrective data-handling policy aligned with the Philippine Data Privacy Act (RA 10173).
- Delivered user training, SOP documentation, and post-deployment support across all systems built, improving adoption and reducing recurring support requests.
- Used AI tools (Claude, ChatGPT, DeepSeek) daily to accelerate analysis, prototyping, and documentation while retaining full ownership of outcomes.

Technical Support Specialist | Additech (Remote)

Jan 2019 – Aug 2021

- Provided remote technical support across multiple sites for 2.5 years in a fully distributed, asynchronous team environment direct proof of reliable, self-managed remote work.
- Monitored system performance via dashboards and KPI tools; managed repair tickets end-to-end and coordinated with field teams across time zones.

Loan Processor / IT Support | Masagana Multi-Purpose Cooperative

Feb – Dec 2018

- Processed loan applications and maintained accurate client records; provided technical support for internal systems early exposure to financial-operations process work.

Computer Technician | High Technology Computer Services

Feb – Dec 2016

- Performed hardware/software installation, troubleshooting, and network setup; delivered on-site support and maintenance.

EDUCATION

BS Computer Engineering — Holy Name University, Tagbilaran City, Bohol (2009–2016)

Fourth year completed; left to pursue full-time IT career.

ADDITIONAL INFORMATION

- Remote & schedule-ready: 2.5 years of remote, multi-site technical support plus 4+ years of independent, end-to-end project ownership; available immediately for full-time US Eastern-hours (night shift) work, including DST shifts.
- Workstation: AMD Ryzen 5 5600G, 32GB RAM, dual monitor, UPS, and backup ISP; dual-boot with Fedora Linux as primary dev environment and a Windows VM for cross-platform testing.
- AI productivity: daily use of Claude, ChatGPT, Gemini, and DeepSeek for automation and prompt engineering public portfolio of finished work product available on request.
- Languages: English (Professional), Tagalog (Professional), Visayan (Native).
- Portfolio: github.com/miming-psspss/alvinp-portfolio
